 Homework #2 - Chapter 1: DFA, NFA
 10/6/2016

1.3

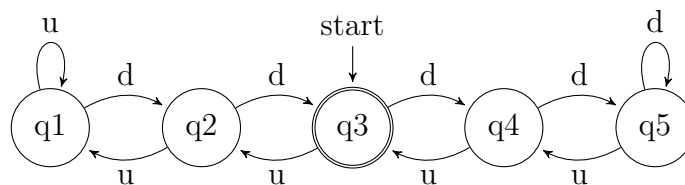

The formal description of a DFA M is $\{q1, q2, q3, q4, q5\}$, $\{u, d\}$, δ , $q3$, $\{q3\}$, where δ is given by the following table:

	u	d
q1	q1	q2
q2	q1	q3
q3	q2	q4
q4	q3	q5
q5	q4	q5

Initial state is $q3$, so that is where the machine will start.

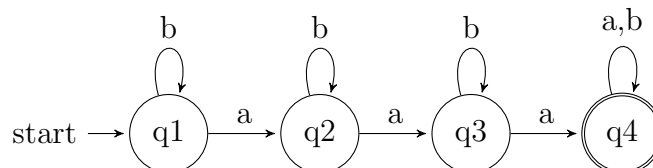

We can use the table to create the nodes, and connect them as needed.

The accepted state is $q3$ so we will mark that with a double circle to show that as the accepted state of the machine.

1.22 In certain programming languages, comments appear between delimiters such as `/#` and `#/`. Let C be the language of all valid delimited comment strings.
